

2.4.10 User Preference

This function allows all users to view and update the User can specify the default setting in the user profile. Setting such as default order type, trade class origin, trade class short sell and source of quote price can be set in this function. After the setting saved, the adjusted changes will be reflected immediately.

By default User Preference is using the values of System Control Parameter when the user is newly created. All default functions and parameters in User Preference are applied as reference for the users once User Preference is updated.
